PRODUCT AND AI PROJECTS

NutriStack | iOS supplement tracking app

nutristackapp.com

- Built and shipped an iOS supplement tracker to the App Store with an AI advisor powered by GPT-5.4 mini and a supplement interaction engine; reached 100+ users.
- Designed a 24-hour radial interface that makes supplement timing visible within a daily routine; developed the app in Swift and SwiftUI.

Multimodal AI Evaluation | Independent project

- Improved measured agent accuracy from 89.6% to 98.7% (69/77 to 76/77) on a fixed 77-item benchmark by diagnosing stalled workflows and repairing repeated-action handling; verified saved completion rose from 14/16 to 16/16 tasks.
- Built a vision-agent evaluation harness with 300+ scored checks, controlled failure cases, and versioned test data; compared accuracy, completion, latency, and cost across configurations.
- Counted unfinished work as incorrect and verified completion from saved results, not the agent's own reports, so incomplete runs could not inflate accuracy.

Prediction Market Arbitrage

- Engineered an automated Python system on AWS that streams live prices from two prediction markets and tests cross-venue arbitrage opportunities under real fees, latency, and fill constraints.
